

## Statement Fieldtests Rohde & Schwarz

During the week of May 5 to May 9, 2025, we had the opportunity to conduct our first field test at **Rohde & Schwarz** 's Teisnach plant – a true milestone for EASE!

Employees from various areas of production and logistics tested our exoskeletons directly during ongoing operations – at their actual workplaces, under real conditions. The hands-on feedback we received was incredibly valuable to us.

We were especially pleased to see that several workstations – including that of **Christian Brandl** – turned out to be ideal for using our exoskeleton. For an entire week, Christian was supported by the EASE exoskeleton during his daily work – and we had the chance to accompany him and observe how he gradually got more comfortable with it and increasingly benefited from the relief it provided.

When we asked Christian whether he liked the exoskeleton and if it made his work easier, he said:

*“Using the exoskeleton takes a bit of getting used to, but each day the process of putting it on and using it becomes more routine, quicker, and easier. And the relief provided by the exoskeleton is definitely good. You can really feel it, and it makes my work easier. Overall, the test week was a positive experience for me.”*

For us, this first field test was a complete success – and a huge motivation for everything that comes next!

Not only were we clearly able to confirm the **Proof of Concept** after just one week, but we also gained valuable insights:

Which workstations are particularly well suited, what our users truly need – and what matters most to them in order for our exoskeleton to offer real value in everyday use.

All of these experiences are now enthusiastically flowing into further development. Our goal is clear:

**An exoskeleton that not only supports, but excites and is gladly used – through simplicity, comfort, and real impact in daily work.**
